

Low Capacitance ESD/Surge Protection for Gigabit Ethernet Interfaces

DESCRIPTION

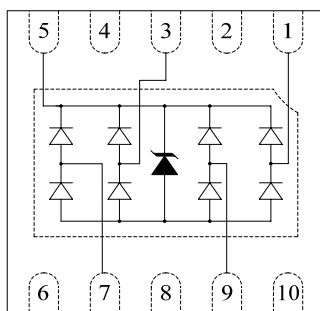

GESD2201-33 is a low-capacitance Transient Voltage Suppressor (TVS) array designed to provide electrostatic discharge (ESD) protection for high-speed data interfaces. With typical capacitance of 3.8pF only, GESD2201-33 is designed to protect parasitic-sensitive systems against over-voltage and over-current transient events. It complies with IEC 61000-4-2 (ESD), Level 4 ($\pm 15\text{kV}$ air, $\pm 8\text{kV}$ contact discharge), IEC 61000-4-4 (electrical fast transient - EFT) (40A, 5/50 ns), IEC 61000-4-5 (Surge) (25A, 8/20 μs), very fast charged device model (CDM) ESD and cable discharge event (CDE), etc.

GESD2201-33 is in a DFN2.6 \times 2.6-10L package. Each GESD2201-33 device can protect two high-speed line pairs. The combined features of low capacitance and high ESD robustness make GESD2201-33 ideal for high-speed data port and high-frequency line (e.g., Gigabit Ethernet Ports) applications. The low clamping voltage of the GESD2201-33 guarantees a minimum stress on the protected IC.
